

What is claimed is:

1. A head-worn shading visor comprising a visor blade and a fabric band coupled together, the visor blade having a peripheral edge stitched with an annular strap and extended
5 upwards to form a fabric section to protect the forehead of an user and extended outwards to form another annular strap to couple with an adjusting fastener which divides the another annular strap into an inner loop and an outer loop, the visor blade having longitudinal folding grooves and transverse
10 folding grooves that are symmetrical on the left side and the right side, the longitudinal folding grooves and the transverse folding grooves dividing the visor blade into a large blade, a medium blade and a small blade;

wherein the inner loop is stitched to the visor blade and is
15 braceable on an user's head by adjusting the adjusting fastener for shading use; the visor blade being foldable about the longitudinal folding grooves and the transverse folding grooves with the annular strap to become a smaller size to be coupled by the outer loop to facilitate positioning and
20 carrying.

2. The head-worn shading visor of claim 1, wherein the visor blade has a curved inner end stitching with the annular strap to form a protection rim.

3. The head-worn shading visor of claim 1, wherein the
25 adjusting fastener has a trough to allow the annular strap to

thread there through.
